

LONE PEAK TRAM FACT SHEET

Big Sky Resort is transforming the winter and summer experience on the resort's centerpiece, the iconic Lone Peak Tram. The new tram is opening in the 2023-24 ski season, providing unrivaled comfort and speed to Big Sky's high-alpine terrain. The new tram unlocks more access to the highest scenic overlook in Montana in both winter and summer, complete with views of Montana, Idaho, and Wyoming, as well as Grand Teton and Yellowstone National Parks. The Lone Peak Tram is an amazing high-alpine feat of engineering, and when complete, will be the first new tram built in North America in 15 years.

During summer 2022 and 2023, construction is ongoing on the brand new tram with a new loading point conveniently located at the base of The Bowl. In winter 2025-26, when connected to the future Explorer gondola, pedestrian passengers will be able to access the summit of Lone Peak on foot for the first time ever.

The installation of the new Lone Peak Tram is the sixth major lift infrastructure project at Big Sky in the past seven years, revolutionizing the way skiers access the resort's 11,166-foot summit.

The Basics

- Two tram cabins, each with up to 75-passenger capacity and configurable seating
- One, 100-foot-high tower, approximately 650 feet below the top terminal
- Unrivaled speed, traveling at 10 meters per second, or 22 miles per hour
- 3.7 minute ride time, with 1.6 minute dwell time in the terminals
- Vertical Rise: 2,142 feet, an increase of more than 600 feet from the original tram
- Horizontal Length: 4,612 feet
- Bottom terminal elevation: 9,024 feet
- Top terminal elevation: 11,166 feet

NEW BOTTOM TERMINAL LOCATION: Now loading from the base of The Bowl, and at the future connection site of the Explorer Gondola, the Lone Peak Tram will travel an additional 600+ feet of vertical than the original Tram.

FIRST EVER PEDESTRIAN ACCESS FROM BASE AREA: With the installation of the Explorer Gondola, the new tram experience will allow, for the first time ever, pedestrian passengers to access the summit on foot from Mountain Village in both winter and summer. Glass floor panels in the summer will allow guests to look down under the cabin as high as 300 feet above the ground.

TOP TERMINAL EXPERIENCE: After unloading at the top terminal, guests can make their way to the glass viewing platform at the highest scenic overlook in Montana, at 11,166 feet, with views of three states and two National Parks. The scenic overlook, as well as glass enclosures for the top and bottom terminals, will be completed in summer 2024.
